Appl. No. 10/065,295
Amdt. dated July 11, 2006
Reply to Office action of May 08, 2006

Amendments to the Specification:

Please replace the Abstract with the following amended Abstract:

Packets filtering method in a wireless network system. The method includes following
5   steps: using a first node of the wireless network system to transmit a packet to a switch of
the wireless network system, using a receiving module of the switch to receive the packet,
using an identifying module of the switch to sequentially compare an address information
of the packet with a plurality of address data of an address list, and using a transmitting
module of the switch to transmit the packet to a second node via a local area network if
10   the address information of the packet corresponds to one of the address data of the
address list.
